PROFESSIONAL SUMMARY

Software Engineer specializing in full-stack, cloud-native application development — building role-based web platforms with React.js, Python (Flask/Node.js), and relational/NoSQL databases, deployed through CI/CD pipelines on cloud platforms (Azure DevOps, Docker, GitHub Actions). A test-automation background from an ongoing internship at ABB adds a strong quality-engineering discipline to that development work: shipping code that is validated, reliable, and production-ready by design. Seeking a Software Engineer role to build and support digital platform solutions on the cloud.

EDUCATION

K.S. Rangasamy College of Technology

2023 – Present

Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science | CGPA: 8.35

TECHNICAL SKILLS

Full-Stack Development: React.js, Next.js, Node.js, Express.js, Python (Flask), TypeScript, Flutter

Databases: MySQL, SQL (Relational), Firebase (NoSQL)

Cloud & DevOps: Azure DevOps, Docker, GitHub Actions CI/CD

Programming Languages: Java, Python, C, C++, HTML, CSS, JavaScript, SQL

Quality Engineering: Test Automation, API Testing, End-to-End Testing, pytest, Playwright, Robot Framework

Applied Data & ML: NumPy, Pandas, Scikit-learn

WORK EXPERIENCE

Software Engineering Intern

Aug 2025 – May 2026

ABB

Bangalore, India

- Engineered and maintained automated test frameworks for web and API applications using Python, pytest, Playwright, and Robot Framework, boosting regression coverage by 30% across 3 product pipelines.
- Spearheaded migration and stabilization of 5+ API automation suites, cutting flaky test execution by 40% and improving test reliability across cloud-based CI/CD environments.
- Streamlined configuration validation workflows by integrating test execution into Azure DevOps cloud pipelines, reducing build validation time by 25% — direct experience supporting cloud platform development and deployment.

Software Developer Intern

Feb 2025 – May 2025

SkySphere Technologies Pvt. Ltd.

Tiruchengode, India

- Architected secure Sign In and Sign Up authentication modules using Flutter and Firebase (NoSQL database), enabling role-based access control for 500+ users with zero reported auth failures.
- Designed and launched a responsive, UI/UX-focused E-Commerce Admin Dashboard using React.js and Firebase, consolidating product management, user oversight, and operational workflows into a single web application.

PROJECTS

Time2Service (Local Service Booking Platform)

- Architected and developed a full-stack service marketplace with three role-based React.js applications (User, Worker, and Admin Portals), using React Router for navigation and Tailwind CSS for a consistent, responsive UI across all three portals.
- Built a RESTful API backend with Python Flask, implementing JWT-based authentication to securely manage role-specific access (customers, workers, admins) and protect booking and profile endpoints across the platform.
- Designed the MySQL relational schema (users, workers, bookings, availability) and integrated it via MySQL Connector/Python, handling raw SQL queries directly for booking transactions and worker-availability updates to control query performance and locking logic.

Network Security: End-to-End ML Pipeline | ml-flow-end-to-end-pipeline.streamlit.app/

- Constructed a production-ready, cloud-deployed machine learning pipeline for malicious URL detection using Python and Scikit-learn, covering all 6 stages from data ingestion to inference — applying data engineering principles across a large-scale data workflow.
- Instituted experiment tracking, model versioning, and data drift monitoring, enhancing MLOps visibility and enabling 15% faster model iteration cycles.
- Containerized the full application using Docker and orchestrated cloud deployment via GitHub Actions CI/CD, achieving zero-downtime releases on a cloud platform.

Agricultural Analysis Dashboard

- Spearheaded a data analytics platform analyzing crop yield, rainfall, and soil datasets across 5+ agricultural regions using relational data models, supporting evidence-based planning decisions.
- Executed exploratory data analysis on 10,000+ records, uncovering yield patterns and seasonal trends that improved resource allocation planning by 20%.

GitHub: github.com/Seran-S-3136/Power-BI-Agricultural-Analysis-Dashboard

ACHIEVEMENTS

- Selected for the Software Engineering Internship at ABB, a prestigious Fortune Global 500 technology and engineering leader, through a competitive hackathon-based selection process.
